CHECKLIST

Weekly Water Refresh Checklist

- [ ] Look at the vase water – if it is cloudy or has a faint smell, it is time to change it.
- [ ] Gather the stems at the base and lift the arrangement gently out of the vase.
- [ ] Empty the old water and rinse the inside of the vase with running water, rubbing away any slime.
- [ ] Fill the vase with fresh, tepid water.
- [ ] Lower the arrangement back into the vase and ensure all stems are fully submerged.
- [ ] Remove any leaves that now sit below the waterline.
- [ ] If stems feel slimy or discoloured at the cut, trim a thin slice from the base with a sharp knife.
- [ ] Step back and check that the arrangement sits level and all flowers are secure.
